«Applying of distance learning technologies within the digitalization of the educational process as a real alternative to education for persons with disabilities»

E V Rezak and S G Pankrateva

Problem statement

- currently, the problem of education and development of persons with disabilities is becoming more and more important;
- their number in Russia increases from year to year, so the issue of modernization and digitalization of education for this category of people is relevant;
- the educational environment should be designed in such a way that each child of this category can not only successfully master educational programs, but also find the best way to learn and successfully adapt to the educational process.

Solution methods

- the article examines the development of education in the direction of digitalization, in which distance learning technologies are actively used in education, in particular for students with disabilities;
- the article analyzes the use of distance learning technologies as an alternative to face-to-face training;
- the main advantages and problems of using distance learning for people with disabilities are considered.

Conclusions

Results, implementation

- distance learning technologies make it possible to effectively organize the learning process for people with disabilities;
- this is often their only chance to get an education;
- the use of distance learning should be aimed at providing assistance in self-realization, socialization of this category of people;
- these technologies contribute to successful socialization, increase motivation to teach children with disabilities, develop their independence, communication skills, responsibility, and provide psychological support.
