«IMPACT OF DIGITALIZATION ON THE PEDAGOGICAL ASPECTS OF TRADITIONAL EDUCATION»

N U Yarychev, Adam U Mentsiev

Problem statement

- Modern education vs. Traditional education
 - The Scenario Now and Then
 - Equality in Education
 - Benefits of digitalization on tradition education

Solution methods

- Digital Learning Makes Students Smarter
- Digital Learning is building up students more accountable and self-motivated
- Advanced education is required to keep in contact with the world and perceive what's going on. Yet, with the expanding importance of modern education, traditional education is neglected, which isn't right. On the off chance that we will thoroughly disregard the traditional education, our way of life will get wiped out. Nobody would have any information about their way of life. We need to safeguard our way of life for the group of people yet to come. For this, we need to realize what our way of life is. For this reason, traditional education is significant.

Conclusions

Results, implementation

- We cannot presume what instruction is better because both the sorts have their significance. Both the types are likewise like each and diverse to one another. Present-day education is acquired from conventional training. Be that as it may, traditional training is being disregarded because of current guidance, which would bring about losing our way of life. The customary training and the cutting edge instruction both ought to be given equivalent significance.
